OIL**

THE WOOD-X STORY

Wood-X is a privately owned New Zealand company. Our products are a successful response to your need for wood oils of the highest quality. Our heritage is special. Right from the very beginning we have remained dedicated to the science behind our products, and now our impeccable reputation is keeping us ahead of the game.

We have a dedicated team behind the Wood-X name, including New Zealand's leading paint manufacturer, Resene. Like us, they believe in a continuous focus on improvement and get excited about the finer details found in your pail. It's a good team!

Backed by Resene's technical team, you can be sure our oil coatings are leading edge on three scores:

1

BASE OIL QUALITY We have selected a highly refined oil, resulting in a noticeable improvement to the penetration and surface dry time of Wood-X Exterior Wood Oil. The value of this feature cannot be understated – oils that simply sit on the timber surface remain vulnerable to wash down and are unable to provide the full benefit that only sub-surface water repellent oils can.

2

BIOCIDE PACKAGE Rigorous testing and critical evaluation led to the specification of a Resene biocide package – a stand out package, designed for New Zealand's climatic conditions.

3

COLOUR TONES OR TINTS You'll be spoilt for choice when it comes to colour tones and tints. More importantly, our range has resulted from extensive research, proven field performance and controlled exposure testing from Resene Paints Colourant Research and Development Lab.

GIVE ME THE GOOD OIL... Here's some important information on our oils. We have a range of both interior and exterior coatings. For a full list of benefits and facts please download a copy at www.wood-x.co.nz or feel free to ask for a copy when you contact us.

WOOD-X EXTERIOR WOOD OIL FACTORS	WHAT DOES THAT MEAN FOR YOU?
Non film-forming, viscous oils	The oils are designed to penetrate deeply into previously uncoated, absorbent, chemical and preservative free exterior timber products such as Western Red Cedar weatherboards, fascia, boards, beams and mouldings.
High quality anti-fungal and water repellent qualities	With Wood-X Exterior Wood Oil, the speed of moisture uptake and loss in your timber will be reduced – meaning you'll limit the potential for them to warp, twist, cup and split. Correctly maintained, you'll greatly reduce the potential for moss and mould growth on your timber.
Wood-X Exterior Wood Oil will slow the moisture uptake on your timber	By slowing moisture uptake, you will improve the overall stability of your exterior timber (including decking).
Non film-forming	Our products won't peel or flake.
Natural looking	Unlike traditional oil stains, our products provide a natural, vibrant and lively oiled look when freshly coated.
Our 'Clear Base' option is just that – clear!	It won't provide a UV protection, which means you still get that lovely, natural weathered silvered appearance over a period of time, whilst the moisture protection still holds.
Our Colour Tone options are endless	Where UV protection and a contemporary colour tone with proven performance credentials are required, we can offer you a range of options – or even discuss inventing a new colour just for you.
You can use Wood-X Exterior Wood Oil on any exterior timber, providing it is chemical and preservative free	Typical uses you may have for Wood-X Exterior Wood Oil include; weatherboards, fascia, mouldings, hardwood decking, outdoor timber furniture, structural posts and beams, timber garage doors, pergolas and fences.
Wood-X Exterior Wood Oil is a wood oil, not simply an oil stain	A traditional oil stain only penetrates a small distance below the timber surface, whereas Wood-X Exterior Wood Oil penetrates deeper.
Wood-X Exterior Wood Oil, has superior volumes of oil content and natural migrating properties	Compared to traditional oil stain, Wood-X Exterior Wood Oil will penetrate and provide water resistance for a longer period of time. Stains will dry out, Wood-X oils never truly do.

A SPLASH OF COLOUR!

If you would like to add a contemporary colour to your project, or just a subtle tint, please ask us for a colour sample on a piece of Cedar or your chosen exterior timber.

We would be happy to show you our extensive colour range.

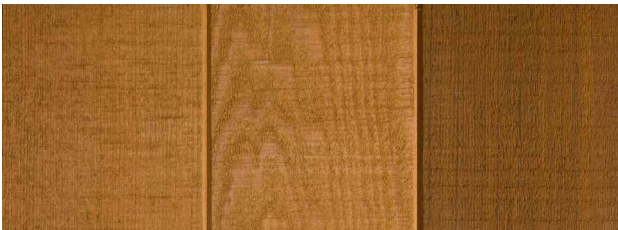

FAVOURED COLOUR TONES

NOTE: All colours are as close to the actual colour as practical within the limits of print reproduction quality. The colour examples depicted reflect two coats of the Wood-X Exterior Wood Oil colour tone on Western Red Cedar, Bandsawn Face timber. The true finish colour will match, with reasonable likeness, any two coat sample colour swatch or brush out available from Wood-X Ltd, allowing for exposure to light and heat, timber grain, timber base colour and texture, sheen, area size, proximity and relationship to other colours and degree of transparency. It is acknowledged that slight colour variations may occur between different timbers, sawn versus dressed and/or sanded surfaces, mixing and coating methods.
